### **Testimonial: Hydraulics**

To whom it may concern,

Geocycle is a hazardous waste specialist which transforms waste into fuel and raw materials. To simplify the loading and unloading of waste it is put into 200 L drums which are dropped straight into a large hydraulically driven gear which shreds the drums. The equipment is expensive especially the gears which cost around \$200,000 each. This process is noisy and hot. Workers are required to wear hearing protection because of the noise.

We have been using Xcelplus for the last ~5 years.

When we first added Xcelplus we found that the noise was significantly reduced (we now no longer need hearing protection) and the temperature decreased significantly. This means wear and friction have decreased. The plant no longer works as hard as it used to. We also noticed that the number of particles (metal mostly) in our hydraulic system decreased. The product is long-lived and does not require regular re-treatment.

The payback period was very short given the reduction in noise, temperature and wear.

We have also used these products in other equipment, machinery and engines with similar results.

We are happy to recommend this product to any potential customer. It does exactly what it claims to do.

Yours sincerely
