Testimonial: Running without oil

To whom it may concern,

About five years ago I added some Xcelplus to my white 2000 Daihatsu Sirion 3 cylinder 1.2 L 4 door hatch. It was run down when I bought it and I tended to neglect it unless it threatened to stop moving. Thus it never got regular maintenance and oil changes were rarely done. The car was treated badly overall.

Then about a year later I used the Daihatsu to shift all my belongings when moving. The engine had a slight rattle, but the car didn't overheat or smoke. Months afterwards I decided the oil needed changing. Upon removing the oil drain plug nothing came out. It had travelled hundreds of kilometres, perhaps including the move without oil. After adding oil it continued to run perfectly, minus the engine rattle.

Everything on this car died before the engine... which was still going perfectly when it was scrapped.

Xcelplus is impressive as there is no other reason the car could have kept going.

Yours sincerely

Dr Anthony Lingham PhD (Chemistry)
