

*“I added the XcelPlus top end treatment to my 2014 Subaru Outback 2.5 L (~40,000 km) early in 2018. The effect on the car was almost immediate: Same routine but next morning the car was more responsive to the throttle and it took less time to warm up. The effect was most noticeable on startup especially in the cold. Also the fuel efficiency is better and power driving around town is noticeably improved. I have been using the XcelPlus Engine Treatment for many years (including in this car) but I have never tried the Top End Treatment (aka Two Stroke Treatment) in a car. I wish I had tried this earlier. Thanks XcelPlus P.S. I have used the Two Stroke Treatment very successfully in Go-Kart racing for years.”*

*“I have been using Slick 50/XcelPlus for over 40 years and cannot speak highly enough about it. I first used it on a Mazda Bongo van that I used for a bread run and because of stopping constantly, the spark plugs oiled up all the time. After I added the Slick 50 to the motor, the vehicle ran so smoothly and never oiled up again. Amazing stuff! I would have used it in 15 cars since and it has improved the performance and fuel efficiency every time. Buy it and see for yourself !!!!!!!!!!!!!!!!!!!!!”*

*"I have a Red Ford BA Mk1 2003 with 400,000 km which I have owned for 5 or 6 years. A few years ago it was getting a bit noisy so I changed the oil and added some Xcelplus. The engine was noticeably quieter after treatment and the mileage dropped from 15 L/100 km (6.7 km/L) to 13.6 L/100 km (7.4 km/L) . That's an improvement of 10.5 %. I just bought a White Ford BF 2006 Mk2 with 136,000 km. I changed the oil and then I decided to try the Xcelplus to see if it works... and it did magic. My son Gene (an electrical engineer) is a regular passenger in the car so he knows what it sounds like. He asked me what I had done to the car as you couldn't hear the engine. You wouldn't know the car was running if you couldn't see the tachometer. Only the sound of the tyres could be heard. I told him I just changed the oil... and forgot I had put in the Xcelplus. He insisted I must have done something more because it was running too well. Then I remembered that I had added the Xcelplus. Now Gene can't wait to put Xcelplus in his car."*

*"In the early 90's I bought the original <formula now called Xcelplus> from a local retailer for my rather tired Toyota Station wagon, the one with the Holden motor in it. It was an ex Telstra vehicle so had been mistreated. When I bought it the motor, gearbox and diff were noisy. After putting the <formula now called Xcelplus> in the engine it had such a dramatic effect I also put it in the gearbox and diff. That made it a different car to run. This was my daily work car and did a lot of kilometers but stayed reliable until one day when the water pump collapsed. Now I don't know exactly when the pump collapsed but I was on the highway at the time and pushing the car because I was running late for a job. I stopped in town at the post office and noticed steam coming out from under the bonnet but didn't even look then as I really was late for the job. The car started as per normal and I went to where I needed to be and parked. An hour or so later I had a chance to find out what was wrong, that's when I discovered that there was no bearing left in the water pump. I know that this reads like a fake testimonial but it is entirely true. I've cooked car engines before so I know that this one should have been totally gone and would have been without the XcelPlus. There is no other explanation possible. I abused that poor engine without the usual penalty. I had a mechanic friend at the time who always said "Oil is*

*cheaper than parts" let me tell you that Xcelplus is cheaper than oil over the life of your car."*

*"In 1983 I had a 1975 Volkswagen Scirocco... treated it with a can of the original <formula now called Xcelplus>... mail order only LOL. A few weeks later I drove over a cement median and smashed the oil pan. Being an ignorant 16 year old... I drove 20 miles to community college and 20 miles back... with the oil light on the whole time. I stopped at shop... they dropped the oil pan and the oil pump was broken in 2 or 3 pieces. They put in a new oil pump and new oil pan and I was on my way. The mechanic couldn't believe I drove 40 miles with no oil pressure and zero damage."*

*"Its the Yamaha WR450 where Xcelplus impressed me. I treated it and in a trail ride lost the 800 ml of oil it holds. Lost it all. Didn't even know. When i put the bike on the trailer is when I noticed all the oil drained out all over the bash plate. Fixed the leak. New oil. Good to go. Never damaged anything."*

*“i used <formula now called Xcelplus> on production based racing bike in 1984/5 , a yamaha 350cc 2 stroke twin cyl, the bike was new brought for that race class, it was amazing, it was faster and revved higher then all the other same bikes, so much so that i was accused of cheating as it wasnt allowed to modify any part of the motor, im not a engineer i cant explain it, it was expensive then, like 50 bucks for the treatment when my wages was about 200 per week lol, the motor stopped one day due to breaking the counter drive shaft of the crank.also it was hard to treat in the first place as the motor had to be running and you treated one cyl at a time through the carbs while the motor was running.”*

*“I saw a demo for <formula now called Xcelplus> back in the late 70's or early 80's. It was impressive! I saw it at the salespersons home and he pulled a horizontal shaft air cooled engine out of his garage and started it up. It had a clear plexi side cover and you could clearly see into the engine and there was not a drop of oil in it. The engine ran for about a half an hour till he shut it off and it was not hot just normally warm. He told me it had over a hundred hours on it. I used it in all of my cars after break in and every 100k. I never had an oil related failure or wear in any of my engines at all. For instance I purchased a brand new 88 Honda Civic and put <formula now called Xcelplus> in after break in. I got 46 miles to the gallon with it combined and 56 on the highway every time I checked the mileage with out*

*fail. The engine after 418k on it ran perfectly and did not burn a drop of oil with out ever having the pan or head off of it. It still worked like it was new and I drove it hard often. One time taking it up to 125 miles an hour. Same thing goes for the engine in my Mustang and Tahoe. Everything else broke on the Tahoe but the engine always worked great. I purchased it for our new car a few years back after having some difficulty finding it and it was just not the same and did not seem to do a thing. Most engine wear is done during start up and severe use. <Formula now called Xcelplus> coated everything in Teflon so it eliminated that wear. It is a shame we lost such a valuable product!"*

*"Back around 1990, I worked for Valvoline Instant Oil Change. They wanted to shoot a radio commercial showing how important it was to change your oil regularly. They bought a beater of a car, and brought it into the shop, had us drain the oil out, and then they started it and let it run. They had the boom microphones set up to catch the*

*sound of the engine seizing up. Well, the car never quit. It was a Mitsubishi or Isuzu 4 cylinder engine. So after an hour of that, we drained all the coolant out, added some sand to the crankcase, water to the crankcase, and nothing. The thing kept running and running. It finally overheated and died. Claiming victory, we pushed the thing out back, waiting for the tow truck to haul it to the junkyard. The tow truck driver comes to pick it up with a flatbed, and asks whats wrong with it. We told him the story. He hopped in it, and it fired right up. We found a <formula now called Xcelplus> sticker on the car.”*

*“I live in Australia and I was introduced to <product now called Xcelplus> in about 1980. I worked for a national road making company as their maintenance manager and a guy called in one day and spoke to me about the product and I gave it a try in an engine that was showing high levels of aluminum in its scheduled oil sampling reports and starting to use oil. I was amazed when the next sampling came back as normal and the machine operator reported the oil use had gone back to normal. Then a little while later the product seemed to disappear from the market however, shortly after that the original vendor arrived marketing a product called Camtron and it too had the same remarkable success. I can testify to some amazing successes using that product from almost instantly quieting a very large gearbox on a manufacturing plant where a spur tooth had broken off and gone down through the gear train severely damaging several gears and roller bearings . This was a very heavily loaded box which I had to wait several months to get parts for and so bad was the noise I expected it to blow up at any minute. Not only did it save the box but it enabled me to run it for a further six months until the Xmas shutdown overhaul. I swear by <this> Teflon additive and if your product is as good as the original <formula> then it must be good”*

*“We started putting 50 % <formula now called Xcelplus> in our extreme duty engines in 1980. Pre using 50 % <formula now called Xcelplus> every extreme duty engine needed a rebuild every winter during our maintenance. After using 50 % <formula now called Xcelplus> our extreme duty engines needed nothing but an external power wash once a year to break lose tar that had baked hard as a rock to the outside of the engines. Before <formula now called Xcelplus> we had to lower blast before rebuilding. After <formula now called Xcelplus> a simple hour spent*

*cleaning the outside of the engines along with standard plug oil & filter changes they were ready for another full season of serious abuse. In 1989 our engines started blowing again even with <product name redacted> so we stopped using it , The oil rep who serviced our company informed us <product name redacted> had changed formulas & it all made sense . ”*

*"i was in the small engine business when the original <formula now called Xcelplus> came out for 2-cycle engines. I had a customer lawn care service he bought Lawnboy commercial 2 cycle push mowers and Echo chainsaws and string trimmers. He had a crew that came back early with blown up equipment they would run out of mixed gas and run them on straight gas. We sold him <formula now called Xcelplus> treatments for 5 lawboy, 5 saws and 5 trimmers. Each bottle made 5 gal of 2-cycle gas. Those units ran for 5 years before one Lawboy came in and it failed due to a bent crankshaft. We tore it down and it had no measurable wear and we tested the gas in the tank and it was straight gas without oil in it. We had a crankshaft straightener and put it back together and sent it back out . Also in 18 hp twin briggs engine with the original treatment the engine oil temp went down from 450 F down to 195 F and in a generator set rated for 8000 w it produced 9500 w that is 2 hp more engine output. The original product worked as advertised"*
