More Acceleration & Power No Smoking or Noise

To whom it may concern,

I own the same car as shown on your product label - the BMW 645Ci. It is a 2006 model, has done 160,000 km and was blowing white smoke after idling and accelerating, after say 2 minutes.

Upon adding Xcelplus Engine Treatment a noticeable improvement in acceleration was noticed within 1 hr and after a few days I feel I had around 20 % more power. The economy stayed the same but this is a result of me planting my foot too much with enjoyment!

Oh, the car does not blow smoke any more - saving me a replacement engine for around \$7,000.

The stuff really works.

Charles Van Dongen

P.S. I originally added it to see if it got rid of a slight metallic noise in the engine. Yes, this noise also disappeared.
