Putting new life into an old motor

To whom it may concern,

About a year ago (~Jan 2020), I treated my eight-year-old McCulloch M3616 (36 cc) 2-stroke chainsaw with the XcelPlus 2-Stroke Treatment:

- There was an instant improvement
- It was like putting new life into it
- The idle increased significantly and stayed up
- I was cutting the same tree, but the cutting felt better
- It was easier to cut
- It was going easier through the timber
- The sound changed: It was more musical

It is straightforward to treat a 2-stroke. All you do is add a small amount of XcelPlus to the petrol.

Yours sincerely

Stan Bielen

P.S. I didn't realise it could be added to the chain bar oiler. I'll have to try that next.
