Masonry drill is a pleasure to use

To whom it may concern,

In May 2020, we installed a metering system batch controller for de-ionised water when the Bosch blue series hammer (masonry) drill started to overheat, and the chuck failed. I took the drill apart and replaced the chuck. We applied XcelPlus Grease to the bearing and gearbox. After treatment:

- We were able to finish the job much more easily
- Drilling concrete was easier
- The drill sounded better
- The noise was pleasant to the ears
- The drill was running like a swiss watch
- You could easily hear the difference in the sound of the machine
- The gearbox now runs cool

We use the drill heavily every week, but the treatment continues to work with just a single application.

Yours sincerely

Stan Bielen
Maintenance Supervisor
